

## Why should you read *The Navigator's Pivot*?

Danura Miriyagalla

If you work across countries, cultures, and complexity—in policy, business, research, or creative practice—this is not just another book on careers or change.

It is a guide for navigating uncertainty when the usual maps no longer work.

Here are **10 reasons why it may matter to you and others you know:**

### **1. Because progress alone stops being enough**

At some point, moving forward doesn't feel like moving in the right direction. This book helps you recognise and respond to that moment.

### **2. Because international work amplifies uncertainty**

Different cultures, systems, and expectations create invisible currents. The book helps you read them.

### **3. Because not all transitions are visible**

Some of the most important shifts are internal—values, identity, purpose. This book helps you navigate both the external pivot and the internal inflection.

### **4. Because you don't need another formula**

You need a way to think, reflect, and decide under uncertainty—not a checklist. This is a reflective guide, not a rulebook.

### **5. Because your context is complex, not linear**

Policy, business, research, and creative work each see the world differently. The *Four Periscopes* framework helps you integrate these perspectives.

### **6. Because experience alone is not enough**

Even seasoned professionals reach moments where their past no longer explains their future. This book helps you reorient.

### **7. Because leadership today is about navigation, not control**

Whether you lead teams, ideas, or change, this book reframes leadership as helping others find direction, not providing all the answers.

### **8. Because you are likely guiding others already**

As a parent, mentor, manager, or colleague, you are already a “wayfinder.” This book sharpens that role with clarity and humility.

### **9. Because uncertainty is not something to escape**

It is something to move through with calm, awareness, and integrity.

## ***Navigation Mindset***

### **10. Because you already have the answers**

The Navigator's Pivot doesn't give you answers.

It helps you ask the right questions and trust what you find.

*Navigate well. Pivot well.*
